🏡 Tenant Success Tip: Defrost Your Freezer

If your freezer has thick frost buildup or your refrigerator is leaking water inside, it may be time to defrost it.

How to Defrost:
• Unplug the refrigerator.
• Remove food and place it in a cooler or inside a blanket.
• Put towels down to catch water.
• Leave the freezer door open.
• Place a pot of boiling water on a towel inside the freezer to speed things up.
• Wipe up water, plug the refrigerator back in, and return the food after the freezer cools down.

Why It Matters:
Excessive frost makes your refrigerator work harder, increases electric costs, reduces cooling efficiency, and can shorten the life of the appliance.

🏠 **Future Homeowner Skill:** Regular appliance maintenance helps prevent costly repairs and extends the life of your refrigerator.

⚠️ Never use knives or sharp tools to remove ice. They can permanently damage the freezer.
